EWP Dashboard, Progress Update
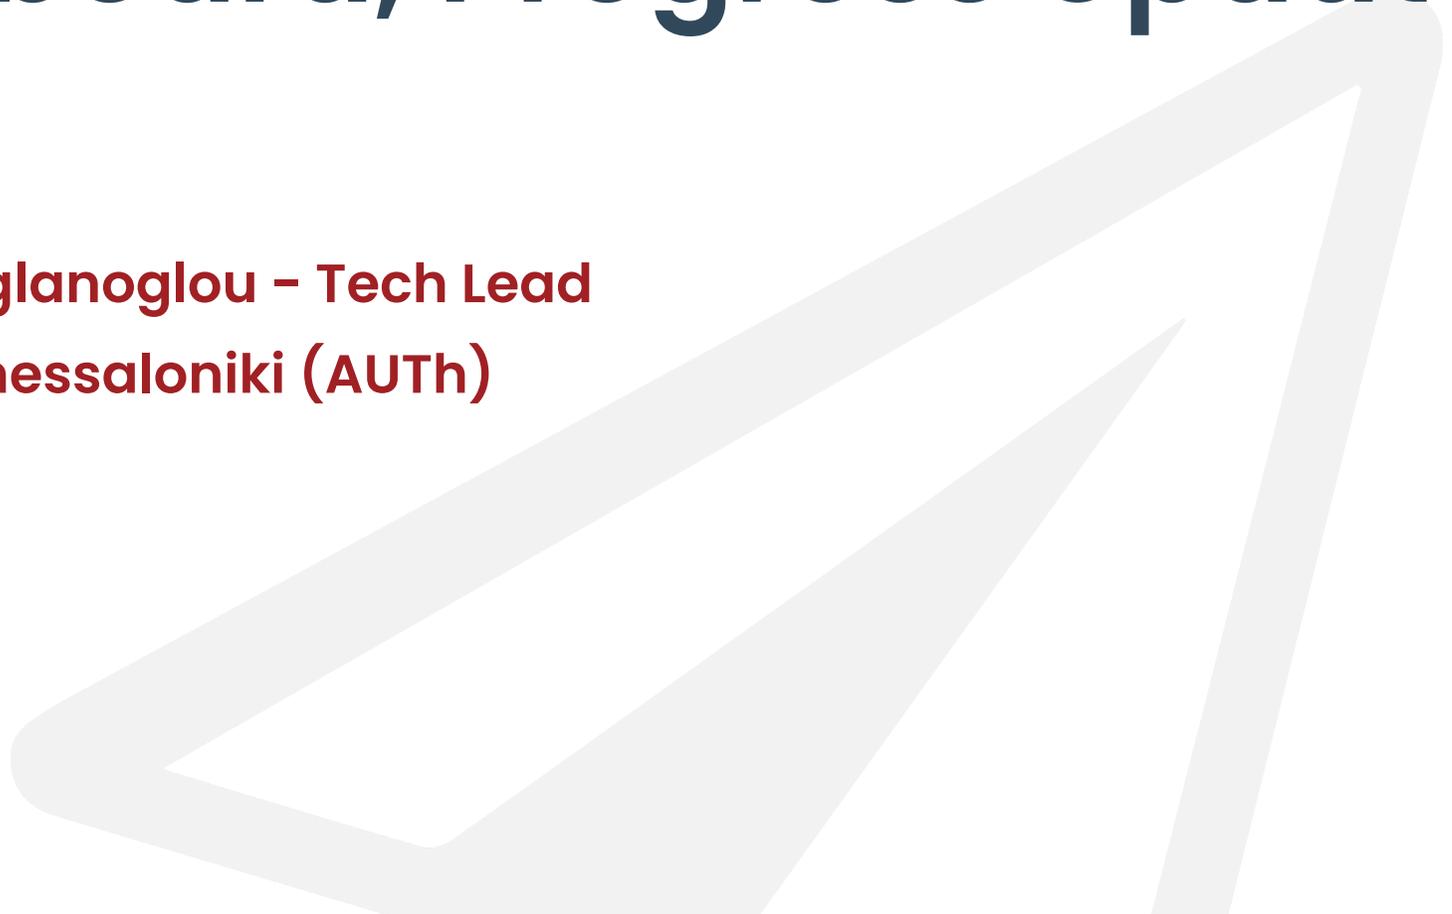

Dr. Konstantinos Karaoglanoglou - Tech Lead

Aristotle University of Thessaloniki (AUTh)

Table of contents

European Student Identifier

The European Student Identifier (ESI) is a digital identifier enabling students to uniquely identify themselves when they access student mobility services online; the ESI supports and eases international student mobility and trans-national cooperation of higher education institutions.

It will allow IT-systems to link information shared via EWP to the right student without a need for any human manual intervention.

Use Case

When the home university nominates a student digitally via EWP, the ESI will be included in the information send to the host institution.

When the host institution receives a Learning Agreement, ESI will enable linking this LA to the rightful nominated student.

At the end of the mobility, a Transcript of Records will be send digitally from the host to the home institution, and once again ESI will be used to identify the student at the home university.

European Student Identifier

Making the European Student Identifier available as an attribute is a task where the IT team of the university needs to be involved.

The technical information can be found at the Géant Wiki with information about the European Student Identifier: https://wiki.geant.org/display/SM/European+Student+Identifier

EWP Admin Role

The EWP Admin role (Erasmus Without Paper Administrator role) has been defined to enable authorised representatives of Higher Education Institutions (HEIs) participating in Erasmus+ activities to login in a federated manner to EWP tools to manage their EWP information and settings.

The EWP Admin role is currently utilised by the Registration Portal, and there is provision to be utilised by the EWP Dashboard in the near future.

EWP Admin Role

Making the EWP Admin Role available is a task where the IT team of the university needs to be involved.

The technical information can be found at the Géant Wiki with information about the EWP Admin Role: https://wiki.geant.org/display/SM/EWP+Admin+Role

EWP Stats Portal

Provides stats, info and useful insights for the data exchanges in the EWP Network.

Visit the EWP Stats Portal:

EWP Dashboard - Ongoing Maintenance

- Ensuring the EWP Dashboard Connector is functional, and operational. Ensuring a smooth exchange of data in the EWP Network.

- Considering the EWP Dashboard's magnitude in the network, we are working relentlessly, in keeping with the responsibility of being the reference implementation.

EWP Dashboard - Ongoing Testing

- The EWP Dashboard is the primary testing partner when implementations of third-party providers or in-house solutions wish to test the EWP Network exchange.

- Testing is vital to maintain an adequate level of quality in exchanges in the EWP Network, to avoid problematic nodes and implementations entering the network, deteriorating the quality of exchanges.
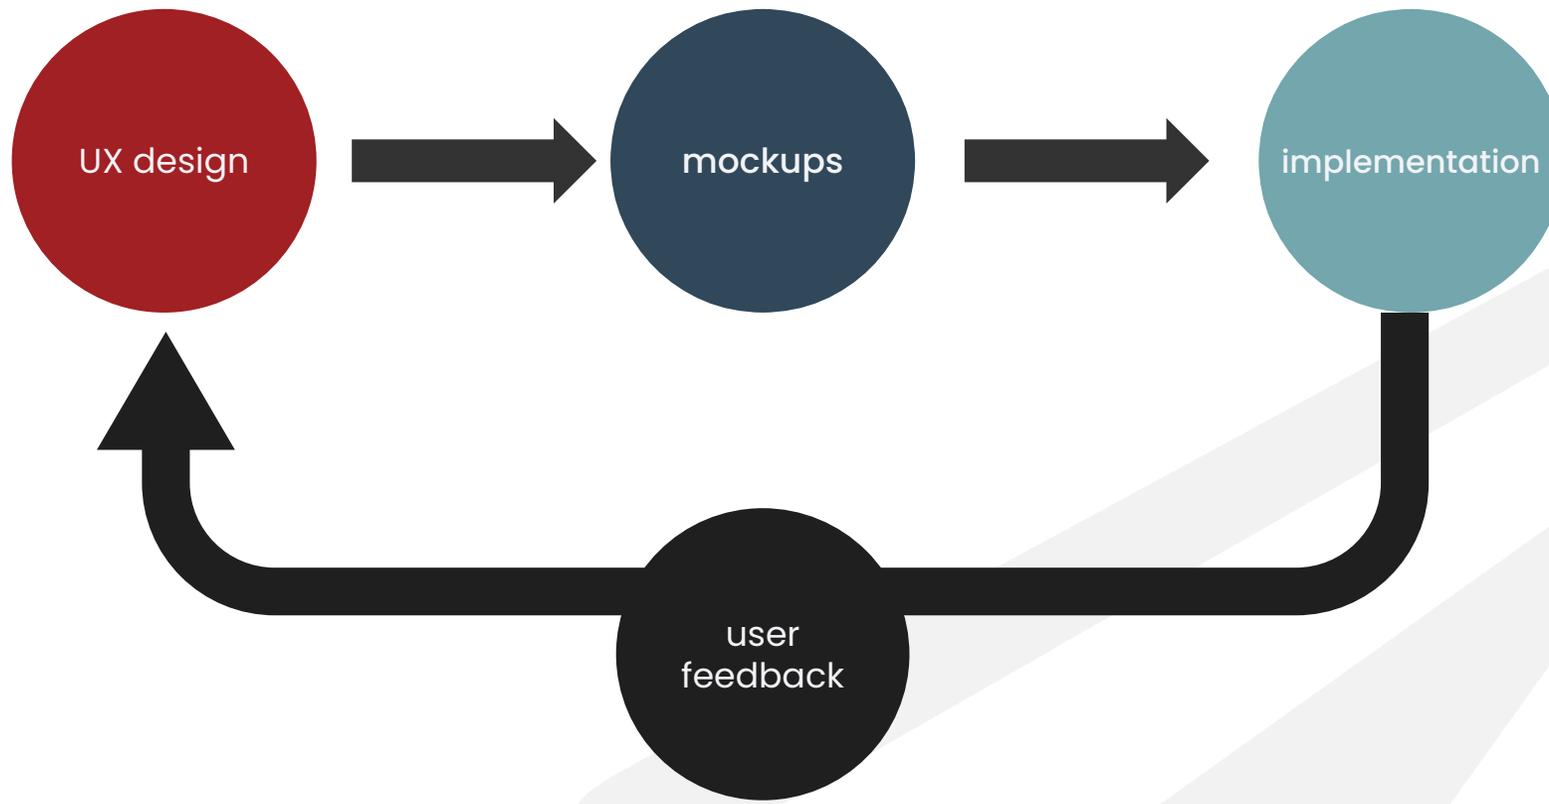

EWP Dashboard - Proactive Debugging

- Proactively identifying issues in other partners' implementations that deteriorate the quality of exchanges in the production EWP Network.

- As the EWP Dashboard's development team, we are actively informing and reaching out to partners, liaising with them, and guiding them towards the light.

## **EWP Dashboard - Improved UI/UX**

Tentative Timeline for rolling out the improved UI/UX

- Implementation on schedule.

- Soft transition approach rather than abrupt switch to the improved UI.

- **Phase 1: Nominations and LAs in early December**: fully accessible from old and new frontend to facilitate transition for the majority of the functionalities.

- **Phase 2: IIAs in end of December tbc:** technical constraints and structural changes make the dual environment approach technically challenging; after considering phase 1 feedback new IIA UX and functionality will be available directly on new environment.

Thank you!
