

# Why should my institution implement EWP?

The overwhelming majority of student information now exchanged in the context of the Erasmus programme is exchanged by email or even by normal post, and seldom the personal information in it is encrypted. Such procedures are not GDPR compliant, and EWP provides an infinitely more secure fashion through which to exchange such digital data. In addition, EWP exchanges data in real-time and is extremely labour efficient. No double work any longer. Finally, the European Commission has decided that by 2025 all institutions will have to be digitally connected in the European Digital Higher Education Area.
