

Is it possible to integrate the Erasmus Dashboard into our higher education institutional platform?

Even though it is not possible at this stage to directly integrate the Erasmus Dashboard in your platform, this system will communicate with the EWP network through a set of specially developed APIs, which will enable HEIs using the Dashboard to exchange information electronically with partners using their own/commercial IT systems. The development of the EWP network is entering its final stage (official launch took place in late 2018) and you can consult the technical documentation of the project [here](#) and its source code [here](#).
