

Score interpretation

In the institution report there is an indication of "good", "fair", "intervention required". The thresholds for those ratings can be configured per institution by setting the fair score minimum and the good score minimum.

If you are logged in as institutional admin you can navigate to the *Score interpretation* page via the *Institutional admin* menu.

By setting the minimum score for "fair score" and "good score" you can configure each of the scores for the different indicators to your own institution. If you consult the institution report you will see that the ratings are based upon the values you entered on the *Score interpretation* page.
