Living costs

The App allows students to see living costs data crowdsourced from their peers, so they can have a better idea of what their expenditures would be during their mobility.

Learners are encouraged to share their own experiences through a specific feature accessible via the **Share** button, as can be seen in the video.

Your browser does not support the HTML5 video element

From the crowdsourced database, the App generates a clean visualisation of living costs that gives important information at a glance, while also comparing data with the average for all learners.

Living costs

Brussels

Monthly living costs

Brussels	€800
Average	€585

Monthly accomodation costs

Brussels	€600
Average	€369

Everybody can then explore the information input by students through the living costs App page and switch easily between cities to see the difference.

The living costs page can be accessed from the mobility journey menu, from the *Discover possible destinations* page and from the *My Destinations* page in the user's profile.

Only logged in users can see the *My Destinations* page, but the first two options can be used by everyone without needing to register or sign in. However, contributing living costs data through the **Share** button is possible only for registered users.

Discover possible study destinations

Choosing your destination can be determined also by the living costs of the cities that are your possible choice. Looking for this information is not always easy and this is why the Erasmus+ App offers you a living costs calculator based on monthly expenses shared by fellow students in the Share + section of the App.

Start calculating your living costs for your preferred city from the button below.
